## Kerecis® Omega3 Wound

Intact fish skin grafts for tissue regeneration

### Chronic painful venous leg ulcers\*

*Failed negative-pressure wound therapy and autografting*

#### Patient History

- 86-year-old woman
- Recurrent painful, chronic ulceration in the right lower limb
- Wound duration over 3 years
- Previous treatment included compression, debridement and local wound treatment
- Negative pressure wound therapy failed
- Meshed autograft transplantation failed
- Pronounced and chronic pain

#### Treatment

- Kerecis and compression therapy
- Rapid and progressive wound healing
- Rapid and progressive pain reduction
- 6 applications of Kerecis® Omega3 Wound
- Complete healing within 14 weeks
- Wound remains healed 1 year later

## What is Kerecis® Omega3 Wound?

**Kerecis Omega3 Wound** is intact Icelandic fish skin that is identical to human skin and is used for tissue regeneration. Because there is no risk of a viral or prion transfer from Icelandic cod to humans, the fish skin only needs gentle processing for medical use and maintains its natural structure and elements. The fish skin is a natural microbial barrier.

The superior clinical and economical performance of **Kerecis Omega3 Wound** has been demonstrated in two non-industry sponsored, double-blind, randomized clinical trials and in more than 50 other clinical studies.

### Indications for use

- Diabetic ulcers
- Chronic vascular ulcers
- Venous ulcers
- Pressure ulcers
- Draining wounds
- Trauma wounds: abrasions, lacerations, second-degree burns, skin tears
- Surgical wounds: donor sites/grfts, post-Mohs surgery, post-laser surgery, podiatric, wound dehiscence
- Partial and full-thickness wounds
