

# PRESSURE ULCER

68-year old female patient with a pressure sore (grade III), sacral

## PREVIOUS TREATMENT

Healing by secondary intention with moist wound care (hydrofiber and antiseptic wound gel) during 7 weeks without significant improvement of the wound situation.

## TREATMENT WITH ①

Wound cleansing with saline solution, application of ① and wound coverage with a foam dressing during the first week, then with a non-woven gauze.

## RESULT

Wound closure within 41 days.

## CONCLUSION HEALTH CARE PROFESSIONAL

*Dr. F. Castrignano, MD, Italy*

“I was impressed by the speed of granulation. Especially after having observed the healing process for 7 weeks before treatment start with ①, I was surprised about the positive development. The application of a secondary dressing is often a time-consuming task in such locations, but when applying ①, the time for a dressing change is reduced significantly, which is especially helpful for the caretakers.”
